beta7

Data from Rodriguez et al. (2004) Differential Gene Expression by Memory/Effector T Helper Cells Bearing the Gut-Homing Receptor Integrin alpha4 beta7.

Description

This data package contains an `marrayRaw` instance for the as well as 6 `gpr` files of the beta7 microarray experiment.

Usage

```
data(beta7)
```

Details

Each arrays(hybridization) involved $\beta7+$ cell RNA from a single subject (labeled with one dye) and $\beta7-$ cell RNA from the same subject (labeled with the other dye). Target RNA was hybridized to microarrays containing 23,184 probes including Operon Human version 2 set of 70-mer oligonucleotide probes and 1760 controls spots (e.g. negative, positive and normalization controls spots).
